

**Politecnico
di Torino**

City and Territory Studio
Module of Urban Design
Lecture 1 . Turin, September 23rd, 2026

- Urban planning module: expected final findings for the exam. (slide 3)
- Site work area and the surrounding territorial structure.
- Part 1: Urban scale (slides)
Part 2: Territorial scale (slides)

Professors: Mario Artuso, Saskia Gribling
Assistant: Alma Vecchiotti

LESSON's STRUCTURE and usefulness for the analysis survey

A - Urban planning module expected final findings for the exam. (slide 3)

B - Knowledge of the work area and the surrounding territorial structure. Part 1: Urban scale (slides) Part 2: Territorial scale (slides)

A - Urban planning module expected final findings for the exam.

1. URBAN SURVEY – ANALYSIS MAPS

2. URBAN STRATEGICAL LOGIC – POLICY – STRATEGY

3. URBAN MASTERPLAN – DESIGN

COURSE EXPECTED OUTCOMES

URBAN SURVEY – ANALYSIS MAPS

BROAD TERRITORIAL SCALE

URBAN SCALE

FIRST SHARED REFLECTION

**WHY DO WE CARRY OUT THIS
BOARD TERRITORIAL SCALE AND
URBAN SCALE ANALYSIS?**

FIRST SHARED REFLECTION

Connections between our area and the key urban hubs in the surrounding territory.

A- The key urban hubs in the surrounding territory. Which are they? And why do they are important ?

B- What are the technical tools to measure the connections between the main urban hubs and our site job area ?

LESSON STRUCTURE and usefulness for the analysis survey

- **Part 1 Urban scale :**

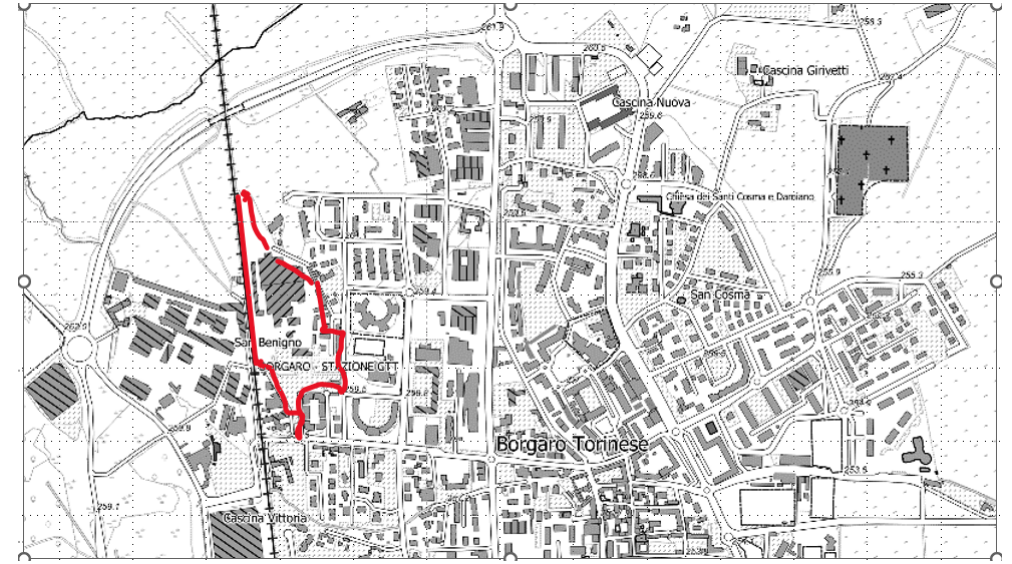

Expected outcomes

Familiarity with the study area

Knowledge of basic urban planning data

Knowledge of the statutory urban planning regulations for this area

Recognition of the area's main urban planning constraints

LESSON STRUCTURE and usefulness for the analysis survey

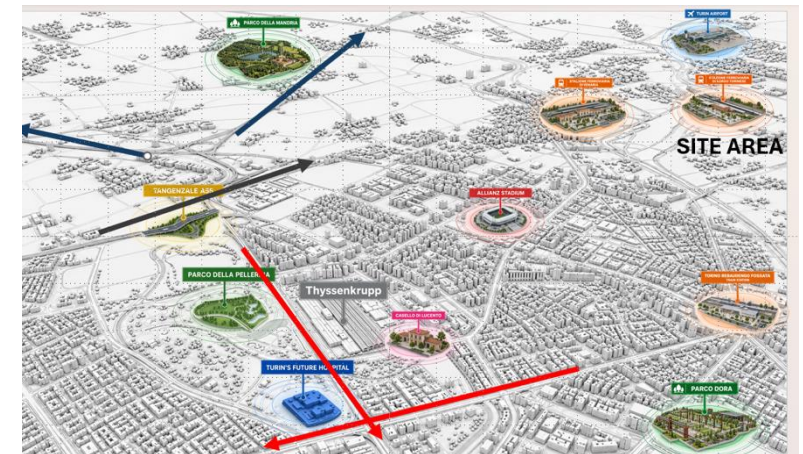

- **Part 2 Broad Territorial scale**

Expected outcomes

Connections with Turin's urban strategic nodes

Connections to key facilities and economic and logistical importance sites located near the study area.

Understanding the "sense of the city"— that is, how urban planning can and must improve people's quality of life.

SECOND SHARED REFLECTION

- Urban planning aims to improve the quality of life for **THE PEOPLE INVOLVED** in the area.:

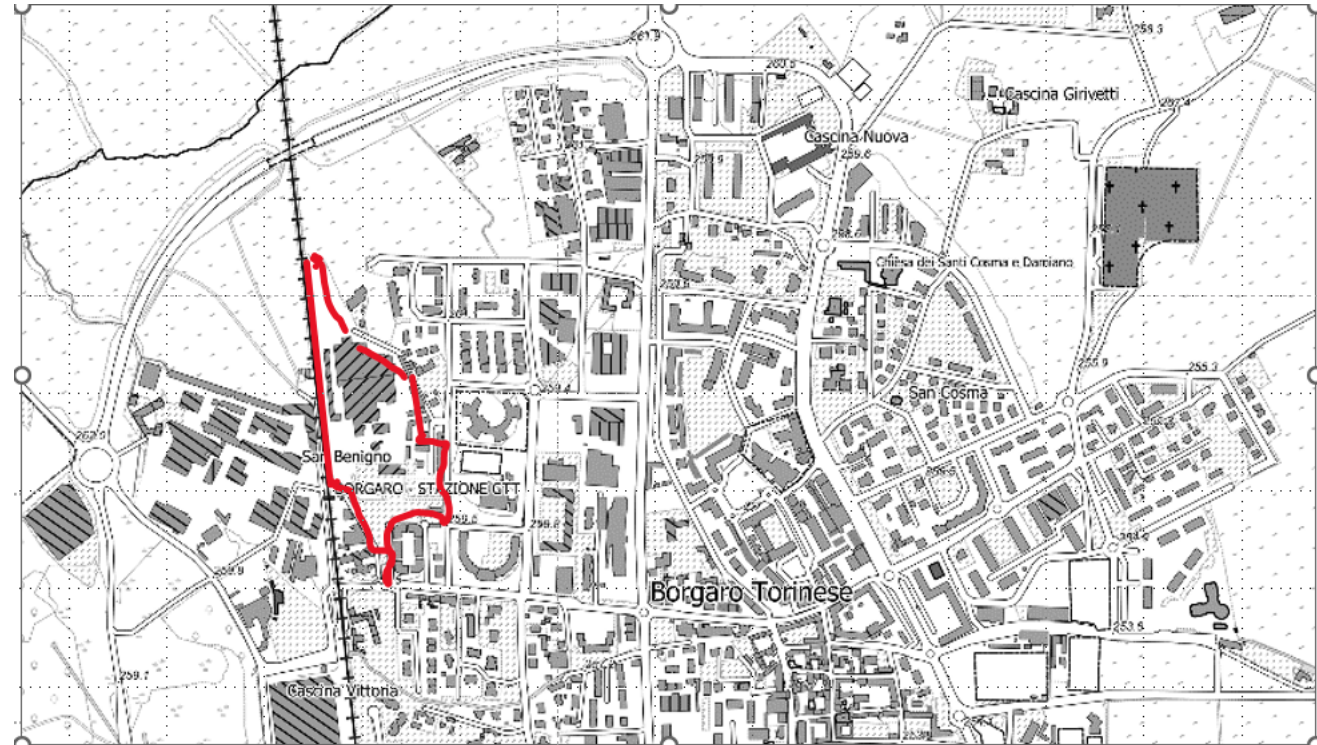

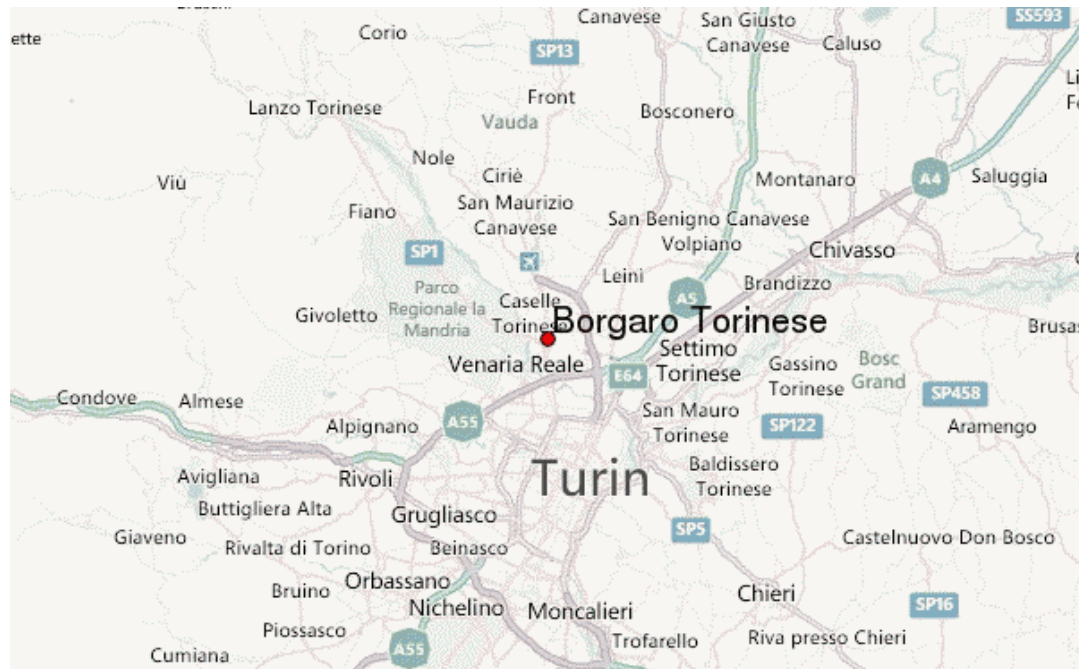

- Part 1 Urban scale :

Where are we?

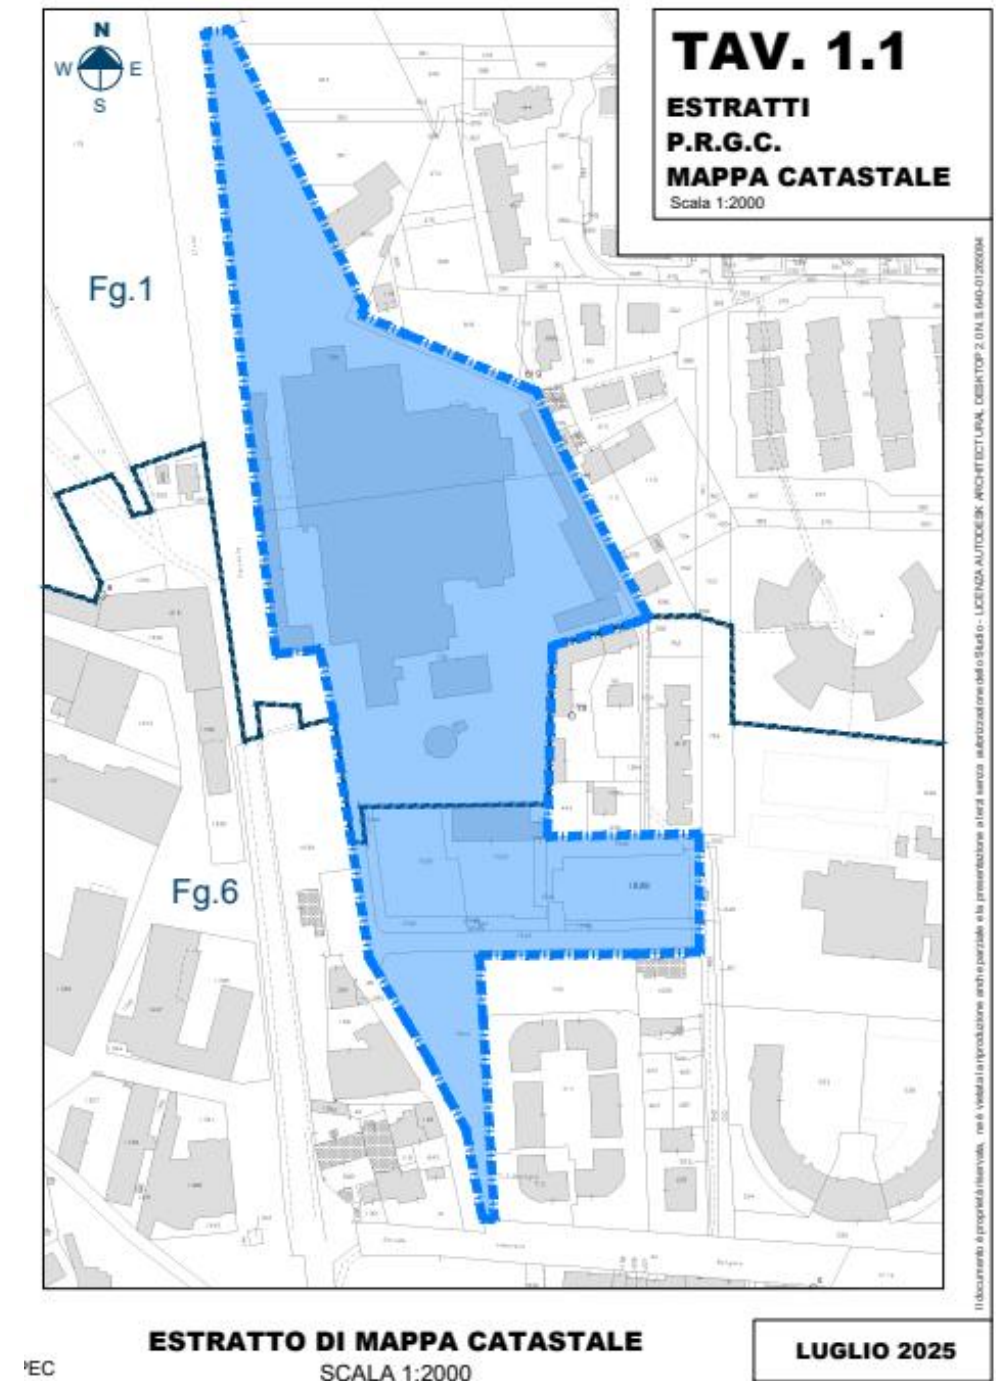

- Part 1 Urban scale :

Where are we?

- # Where are we?

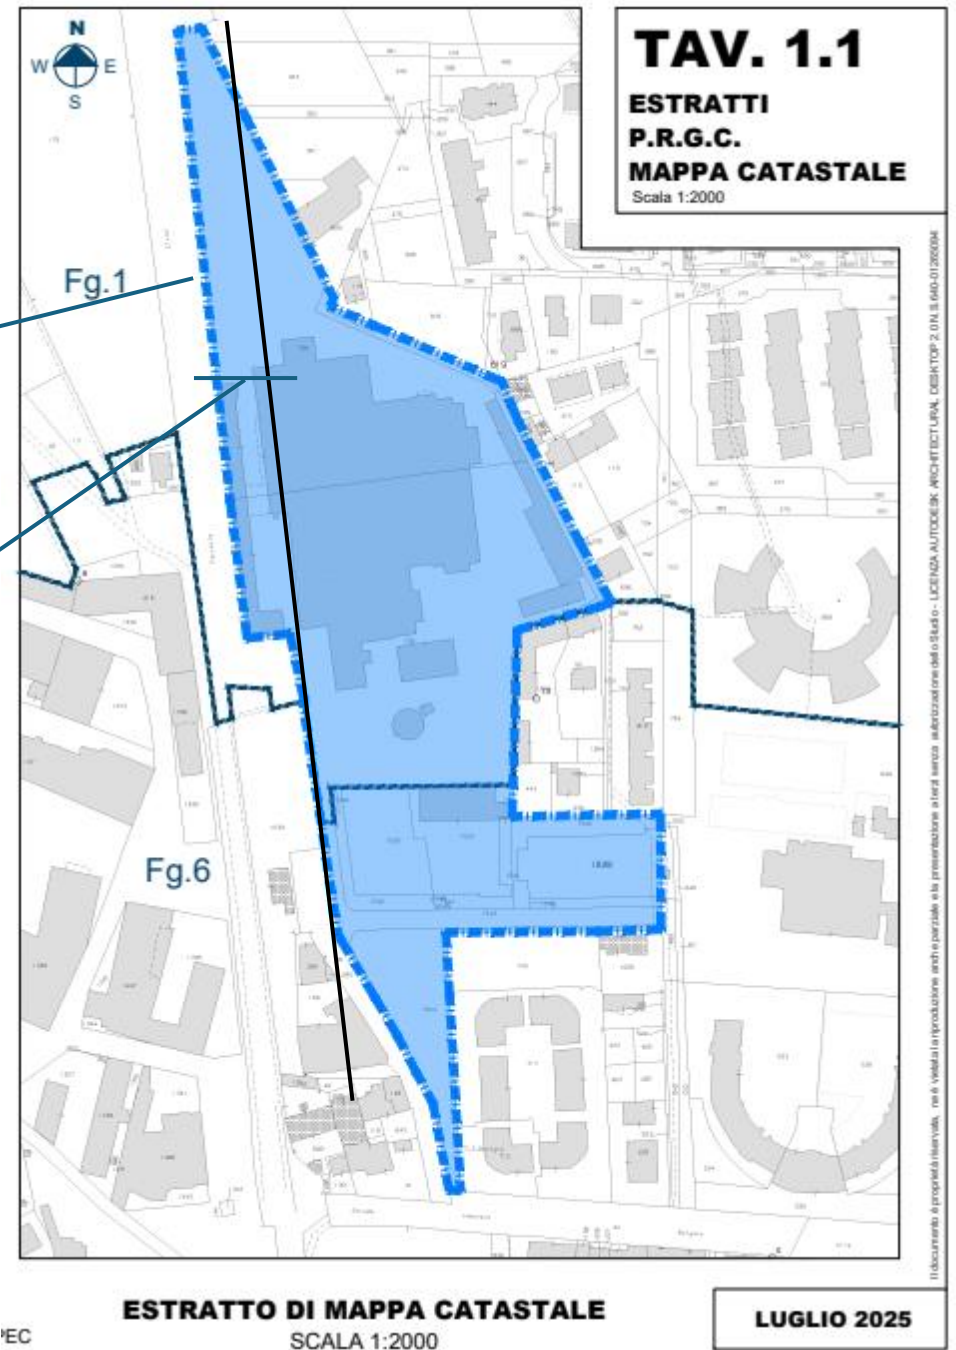

- Part 1 Urban scale :

Mandatory planning restrictions

Existing railway line

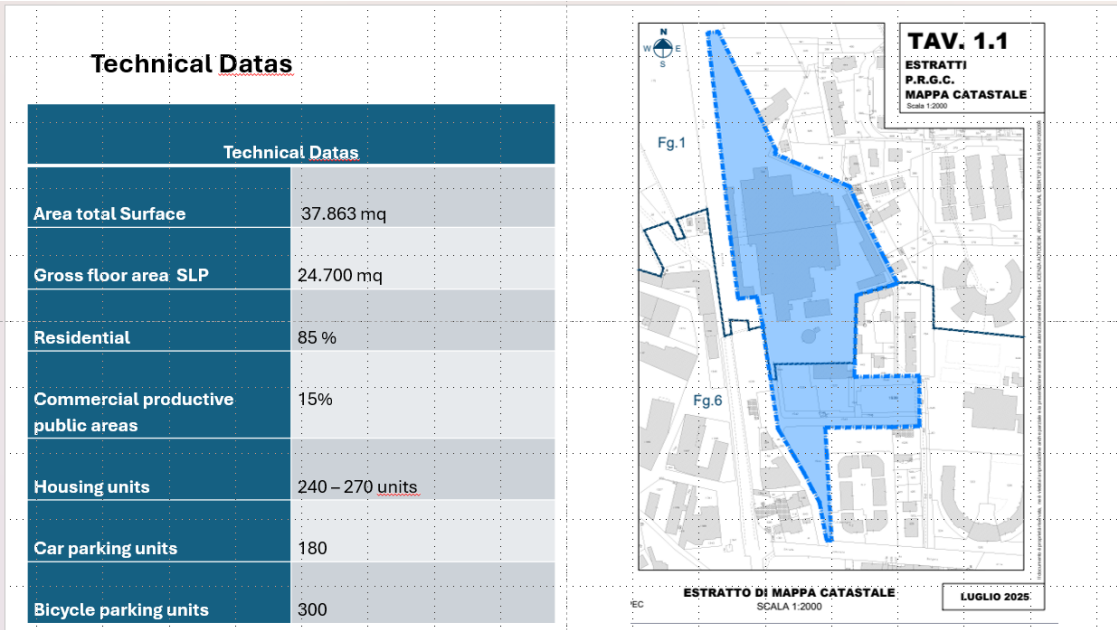

The railway line requires a 30-meter buffer zone; no construction is permitted within it.

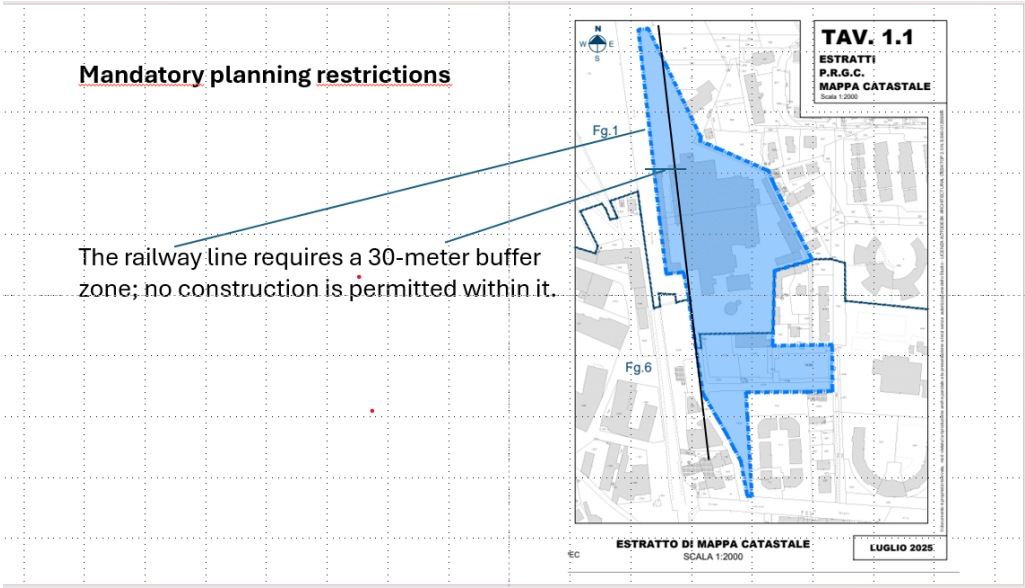

SECOND SHARED REFLECTION

These are the first 2 learning outcomes:

Technical Datas

Mandatory planning restrictions

Break 5 minutes and
questions

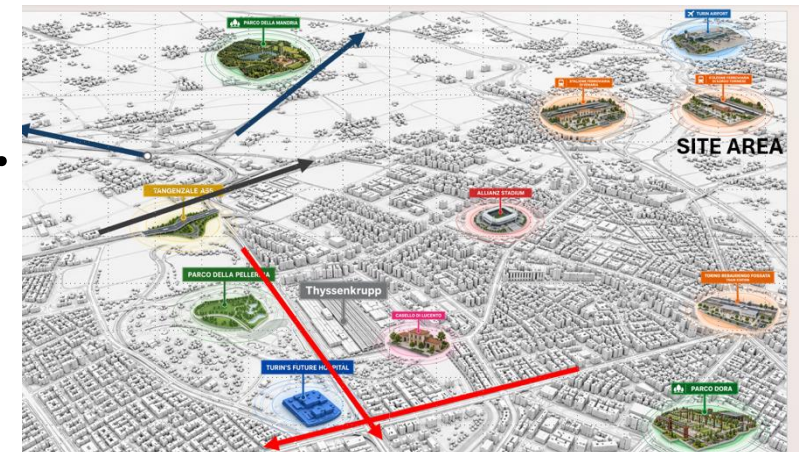

LESSON STRUCTURE and usefulness for the analysis survey

- **Part 2 Broad Territorial scale**

Connections with Turin's urban strategic nodes

Connections to key facilities and economic and logistical importance sites located near the study area.

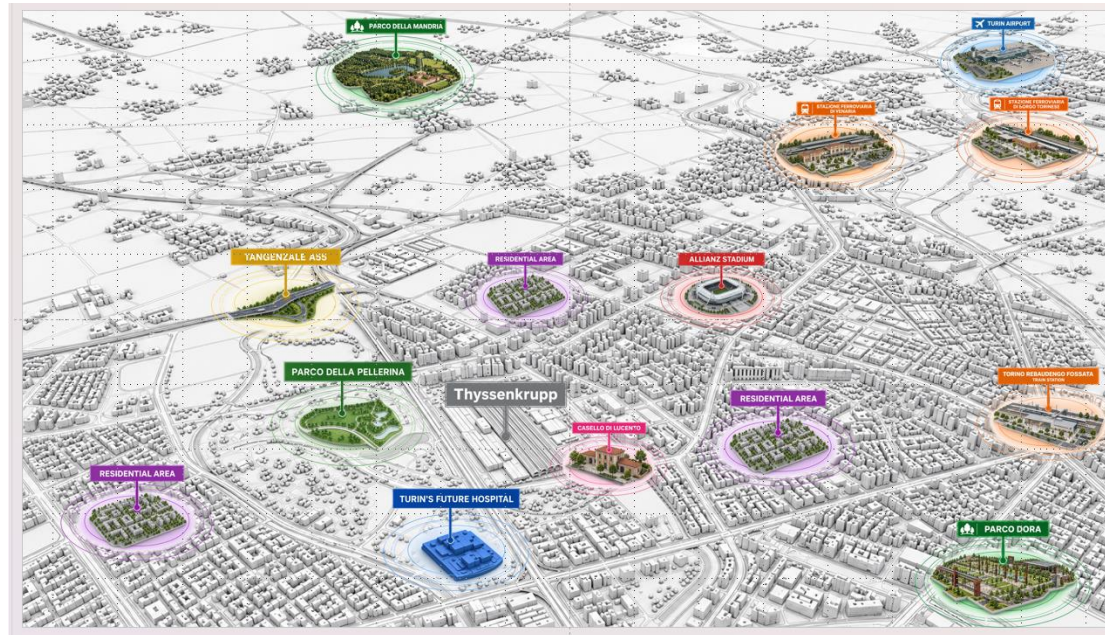

Understanding the "sense of the city"— that is, how urban planning can and must improve people's quality of life, as well as for the requested Analysis map.

- Part 2 Territorial scale

Connections between our area and the key urban hubs in the surrounding territory.

A- The key urban hubs in the surrounding territory. Which are they? And why ?

- Part 2 Territorial scale

Connections between our area and the key urban hubs in the surrounding territory.

B- What are the technical tools to measure these connections?

C- ACCESSIBILITY :

- Part 2 Territorial scale

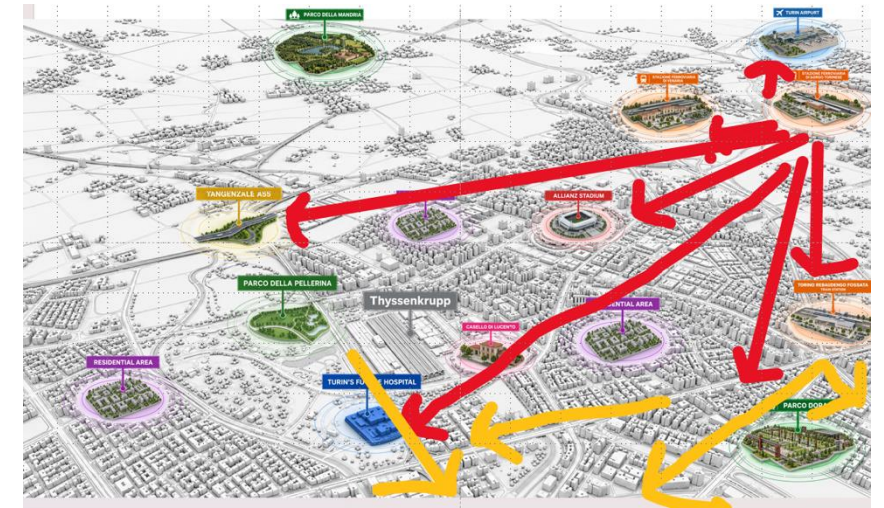

B- What are the technical tools to measure these connections?

C- ACCESSIBILITY

C- ACCESSIBILITY : Unit of measurement?

DISTANCE FROM A LOCATION
(Our work area vs. the city's
strategic nodes)

TIME (Time required to reach a
location from our work area)

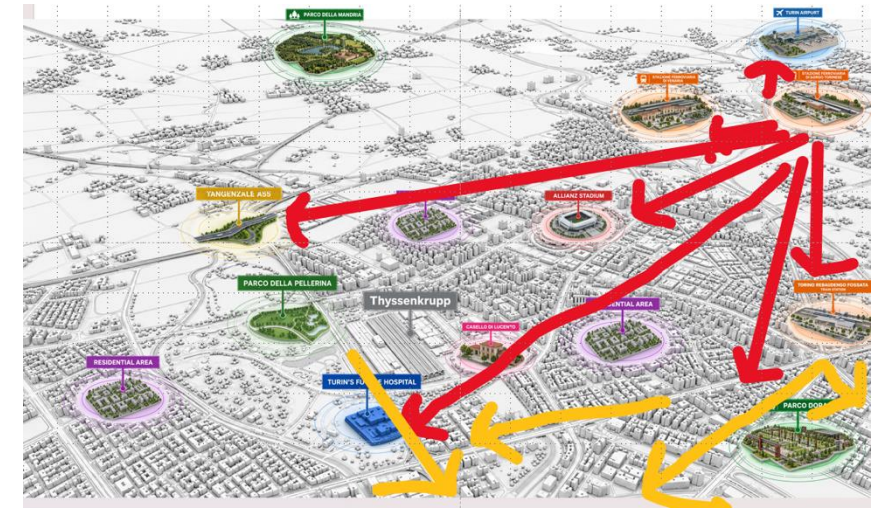

- Part 2 Territorial scale

B- What are the technical tools to measure these connections?

C- ACCESSIBILITY : Unit of measurement?

DISTANCE FROM A LOCATION
(Our work area vs. the city's
strategic nodes)

TIME (Time required to reach a
location from our work area)

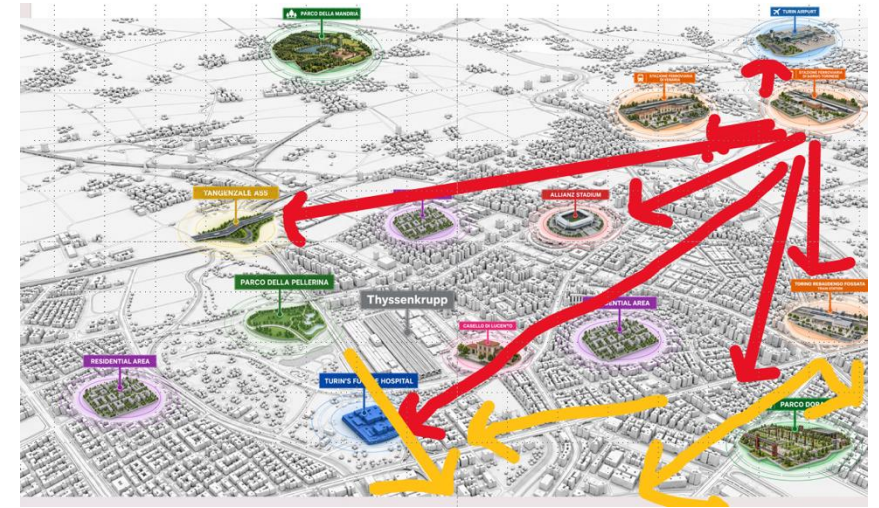

D - If this is the result of your analysis map (1st expected outcome, see slide 3) , what are the consequences for the urban planning of your area?

- Part 2 Territorial scale

C- ACCESSIBILITY : Unit of measurement?

DISTANCE FROM A LOCATION (Our work area vs. the city's strategic nodes)

TIME (Time required to reach a location from our work area)

D - If this is the result of your analysis map (1st expected outcome, see slide 3) , what are the consequences for the urban planning of your area?

E - Enhance the mobility system to improve access to strategic urban hubs.

In what way?

Consider this question for next week's site visit.

THIRD SHARED REFLECTION

- **Given next week's site visit, I kindly ask you to listen to the following Interview (19 MINUTES) and learn about Architect Renzo Piano's « Urban Mending» concept. We will talk about it next week**

<https://www.youtube.com/watch?v=MJGi52V7CRA>

- Thank you
