URBAN PLANNING MODULE OVERVIEW AND CALENDAR

Each group will work on the territorial analysis, and systematic weekly reviews will be conducted, complemented by short lessons on basic urban planning indicators and the basis for their correlation with urban plans. All this will be done in compliance with current urban planning regulations and juridical statements with a focus on the Italian system. The first outcome will be the production of the **territorial analysis (PHASE 1)**.

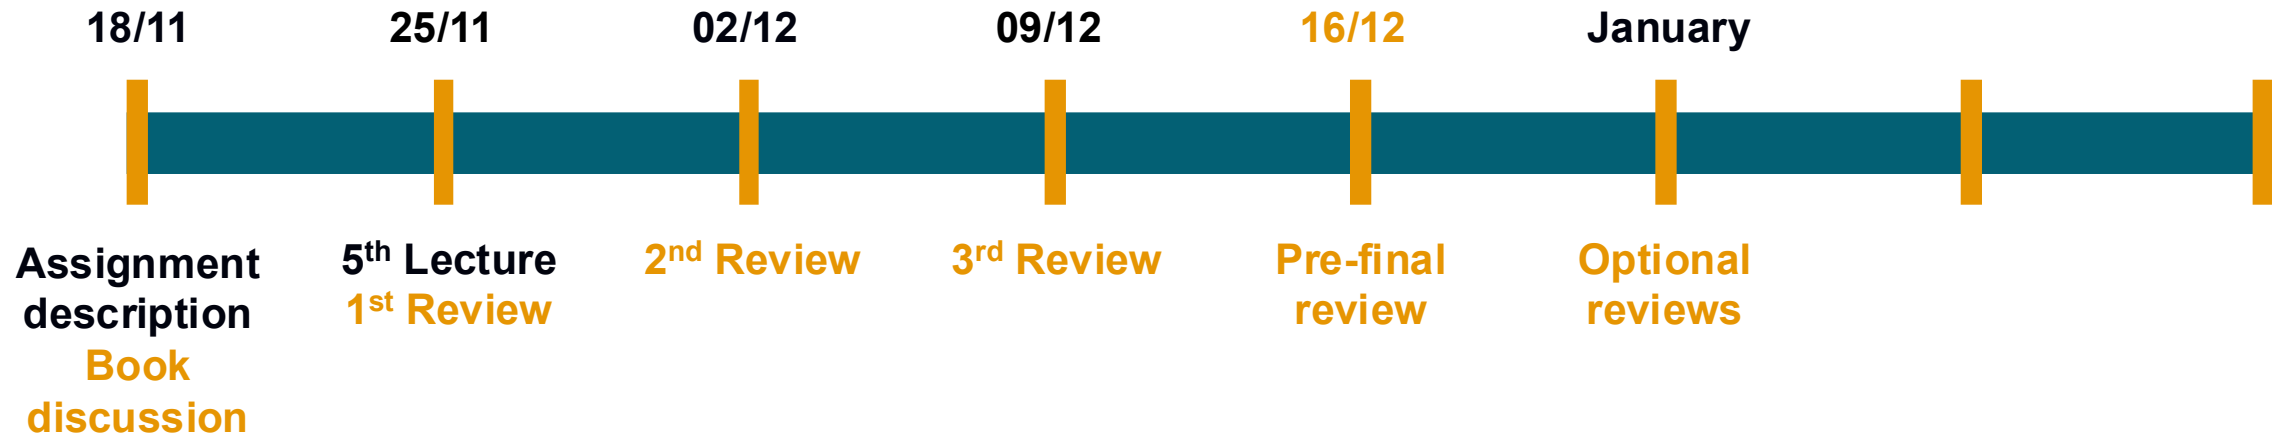

In **PHASE 2** of the module, the **design scenario** using the same methodological framework (reviews and brief supplementary lessons), each working group will present a proposal (A1 boards, number to be defined) that illustrates the results of the urban analysis and defines the priorities for the Preliminary Urban Planning Project and the General Master Plan. This will be the final outcome of the course.

Territorial and urban analysis (Phase 1)

Design scenario (Phase 2)

Territorial and urban analysis (Phase 1)

The aim of the **territorial and urban analysis** (Phase 1) is to present several analytical maps representative of the territory of Borgaro Torinese.

Particularly focus on to the topographic, infrastructural, environmental systems and to the functional, morphological ones.

Present a summary map capable of selecting themes that will further be explored in the **design scenario** (Phase 2).

→ **Bring something to review already from 7/10!**

Constant Nieuwenhuys, New-Babylon Paris, 1963

Mapping is thus a tool for knowledge and research

- Each analysis is already a **selection**;
- Final output, to deliver the 11/11, are **2-3 A1 boards**;
- Select the information you want to show and decide which **representation scale** and tool they need (from territorial to urban) (from maps, to sections, to sketches);
- **Diverse mediums** are very much welcome;
- Make the statistical analysis displayed and part of the analysis;
- Work weekly and use the reviews!

George Braun and Frans Hogenberg "Cairus, quae olim Babylon Aegypti Maxima Urbs" 1572

Book discussion

- INDIVIDUAL ASSIGNMENT

- Ash Amin and Nigel Thrift (2017). **Seeing Like a City**, Polity;

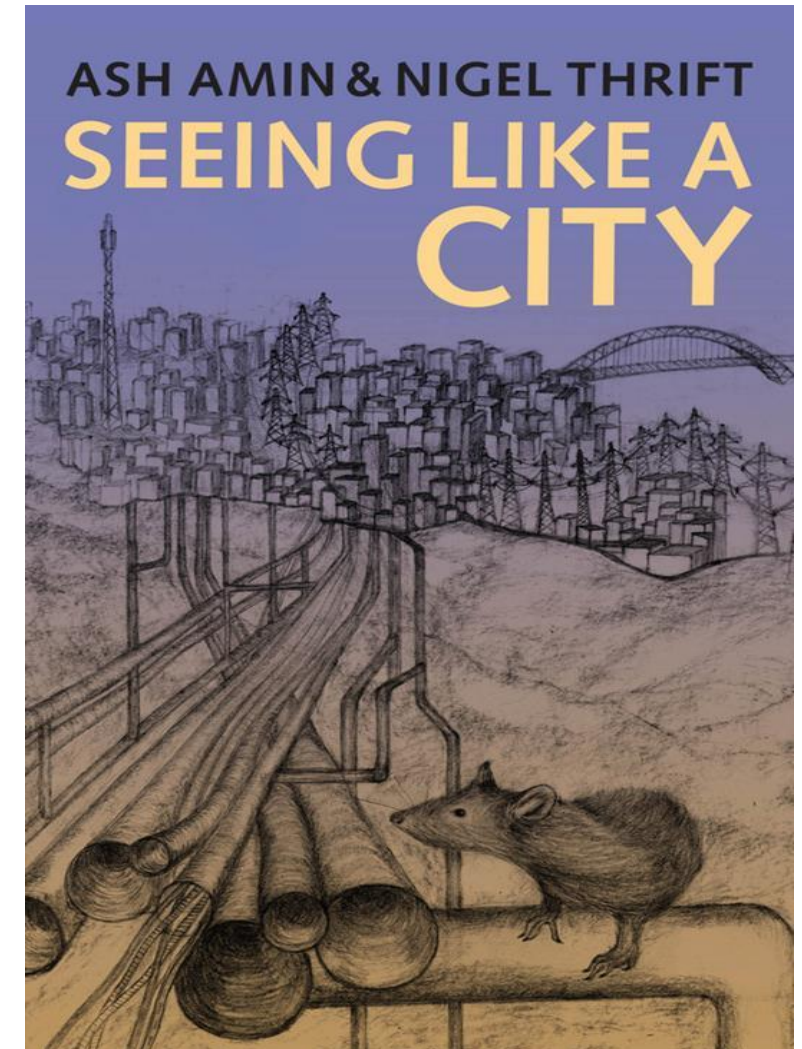

- **Read all the book (:**

- There is one copy you can take from the library @Castello del Valentino (Biblioteca Centrale di Architettura, BCA);

- otherwise, we can provide a pdf version (ask professors);

- **18th of November 2026: round tables book discussions;**

- **Submit a slide by Monday 16th of November;**
(instructions will follow!).

Tools to do urban planning

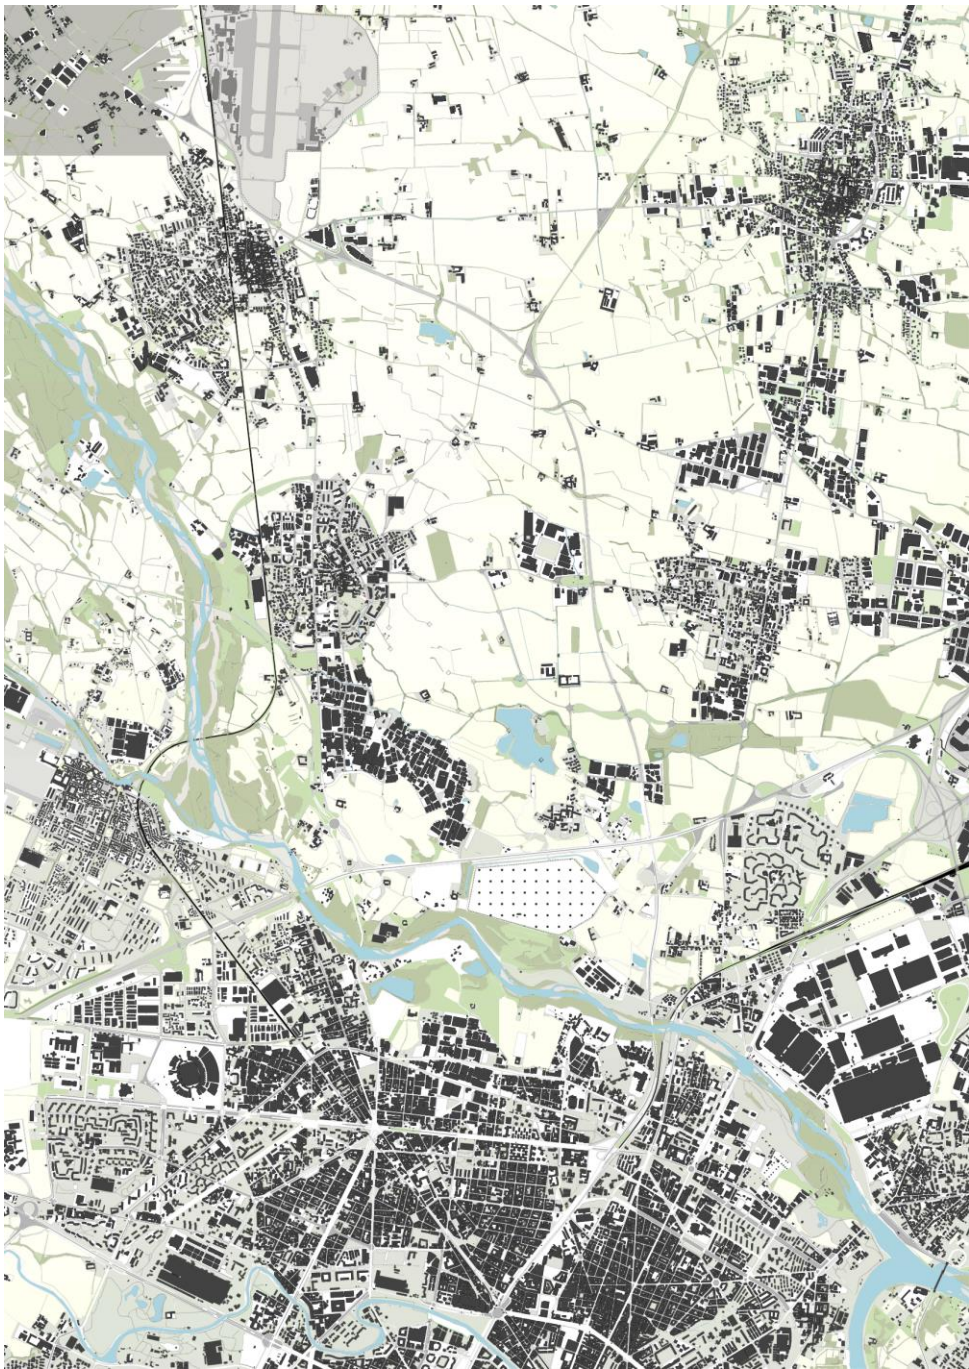

QGIS: A system that allows you to map, model, query, analyse large quantities of data within a single database according to their location.

Where to find the data?

- **BDTRE and Geoportale** (Banca Dati Territoriale di Riferimento degli Enti);
- Portale della Didattica → we have already uploaded the data.

To do before Wednesday 7th of October:

- Download **QGIS Long Term Release** <https://www.qgis.org/download/>
- **Bring your own laptop!**

- Territorial scale
- 1:10000/ 1:15000 / 1:20000

- Urban scale
- 1:2500 / 1:1000
